Dear Mr. Grant,

Thank you for expressing your approval that this patent application could be worked out in our last conversation. Since that conversation we have made some additional changes that may require me to file for a continuation in part application.

I have enclosed two drawings. Fig. 1 is a revised drawing of the original (I had the teeth drawn backwards, sorry) and Fig. 5 contains additional information. Fig. 5 shows a tool containing an undamaged bolt in one drawing and in the second drawing it shows that the biting edge of the tooth covers a greater distance across the bolt than if it went parallel to the hex. This in effect creates a greater bite into a damaged or undamaged fastener.

In the continuation in part application I will put in the dimensions for the terms "slight angle or almost parallel".

Please let me know if I need to file for a continuation in part application it would be no problem, I have it done.

Thank you again for all your help,

Bill Horobec
